

This is the first issue of the Computer Science Letters Journal (CSL). Over recent years Computer Science has integrated with almost every aspect of life, and became a part which cannot be neglected or replaced in many organizations and businesses. These organizations and businesses are deploying software systems and applications of computer science, in order to facilitate their work or to do it faster and better. It is one of the aims of creating this journal is to help enhance and improve the computer science knowledge, which forms the base for deploying and utilization of computer software systems and applications. As can be seen from the articles presented in this issue, the area of Computer Science is an extremely diverse and could be integrated and implemented on almost all domains of working and social life.

Throughout the planning and development of this first issue, a number of things became obvious and important. The first is that the existing of a Computer Science Letters Journal for postgraduate computer science students is important. It helps boost their research work more, especially if it publishes rapidly – in our situation, four times a year. The second thing is, publications have to be of a good quality in order to publish a really valuable journal, and this is what the team of CSL is working hard to fulfill.

This first issue contains four articles. Each article touches a different discipline in computer science recent issues. CSL Journal is proud to have these articles in its first issue, and hopes to always receive good and high quality of research papers for publishing.

When launching a journal there are many who must be acknowledged. Firstly I would like to thank the editorial board members for their dedication to this venture. Without their input this journal would not have been produced. Secondly I must acknowledge the support team members whom through their efforts and hard work, this journal has successfully published the first issue. Finally I must thank and congratulate all the authors in this first issue. Their high quality articles have set a precedent for the journal.
